## **Abstract**

In the future battlefield environment and high-tech weapon operation. Military personnel must have "multi-functional, multi-disciplinary, multi-combination" combat capabilities. All units in the self-training already have a mature training process. But the quantify evaluation mode have not been import into the performance evaluation. In recent years, It has been widely applied into the military 、commercial 、education and management fields. In this study, combined with dynamic time 、group decision making and multi criteria decision making methods are applies in the military training. So as to establish a systematic assessment model, and expect a fair and impartial assessment for the Military Training Performance Evaluation.

**Key words** : Military training, Group decision making, Dynamic time, Multi criteria decision making
